AIT – Advanced Integrated Technologies –, a security systems integrator based in Dubai, to extend the business scope to cover the Middle East and North Africa

AIT is much more than a product distributor; it is the state-of-the-art integrator committed to providing cost effective yet leading edge-security and Low current solutions.

AIT is based on the premise that traditional security is simply not enough for our present times. The flaws of keys, cards and pin codes for the access control have been known for a long time. Keys and cards can be lent, lost, copied or stolen while pin codes can be overseen or forgotten, what is worst, however is that it may take days until security breach is known.

Who are we

In the 21st century, globalization has created enormous pressure on both corporate and public sector in terms of market reform and privatization, which have resulted in short to medium term contracting and engineering and business. Major engineering and construction projects are increasingly more complex and demanding, sourcing technology solution from numerous locations around the world. By having the right professional resources on the ground at the right time and price, AIT serves its clients to ensure stand quality requirements and time on-time delivery are met

History

Established in 2014, as Security Systems Provider Company, AIT proposed as a Security Systems Integrator/provider.

AIT is one of the leading and reputed security system integrators in Middle East. Our operations are based throughout the region and have the capability to do work for clients virtually anywhere in the world.

Our Vision

To be "the best but not necessarily the largest"

To be on leading edge of the Security Industry in the region by continuously developing and executing our core competencies on the highest level of standards.

Our Mission

AIT is committed to provide lean contracting services focused on security and systems integration, leading to security, safety, reliability, and quality at the right price.

AIT mission is to become a highly competitive Business partner of integrated in-door services, locally and internationally, satisfying the needs of Clients seeking international standards and Commitment to time and quality.

AIT aims at creating an organization with culture that cares for employees, promotes their Performance and makes them feel Different and proud.

Our Core Values

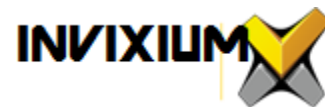

In performing These Missions, AIT adhere to these core values;

- Fairness and Honesty
- Continuous Improvement
- Leadership and guidance
- Quality and integrity

Partnership & Certification

AIT has always believed that success is never a solo act, and thus stressed on making the right partnership in all of its projects. At AIT we are keen on partnering and certifying by the highest quality corporations and brands worldwide.

Customers who utilize AIT benefits

- Financial strength to support large scale project
- Reputation and certification that exceed clients expectations
- Highly qualified interdisciplinary staff with lean HR management
- Work with upmost quality companies and brands in the technology
- Strong focus on the integrated technology solutions
- More than twelve security systems experience
- Consistent first class service at the right price using AIT – Experience
- Managing by objective and leading by example with our unique methodology

Top Recognition from Clients

Over the years, AIT has designed and executed numerous security projects to many national and international organizations, of which the following are the top clients;

Numerous clients are recognizing AIT for its professional approach, trustworthiness, and going the extra mile to ensure on-time project completion while meeting quality requirements.

Full list of clients is available upon request.

What we do

Service Portfolio

AIT is offering extensive capabilities and wide range of professional services through the following services lines

Security & Low Current Integrated Technology Solution:

At AIT, we have a competitive advantage because of our ability to bundle electronics and data systems capabilities to offer a full, turnkey approach for our customers. Our ability to design in-house and coordinate the data systems infrastructure with the electrical design allows us to deliver a powerful package at a competitive price. More importantly, this in house capability streamlines the accountability, design, planning/coordination, procurement, and installation on any project. The majority of local area network problems are attributed to cabling system performance. Building cable systems must support and integrate data, video, security, distributed sound, wireless technology, and environmental controls. AIT knowledge base includes BICSI, ANSI, and EIA/TIA standards; National Electrical Code; and product manufacturer and industry-accepted methods including inter- building, backbones, horizontal links to the desktop, open office, and centralized cabling designs. We are providing the following individual and incorporated system solutions include:

- Integrated Security Management system
- Access control Systems
- Fire Alarm system interface
- RFID and asset Tracking systems
- Building Management Systems integration
- SMA TV Systems

Advanced Integrated Technologies L.L.C

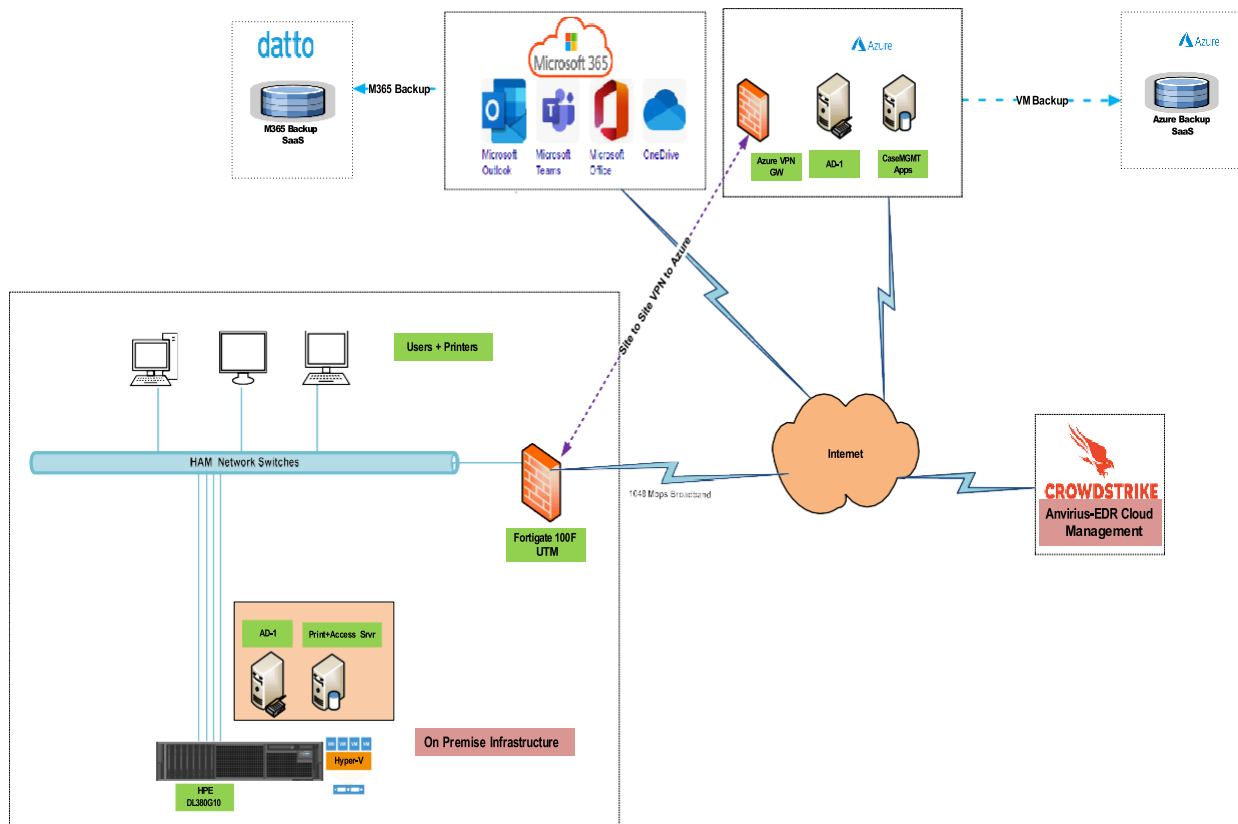

Datcenter Business Solutions:

AIT offers a wide-range of cost reduction solutions that will address IT business needs from server, storage, virtualization, consolidation, archiving, computing and security.

We can help customers in choosing the right business solution tailored to their needs and in achieving their strategic business objective.

Our services include:

- On-Prim solutions.
- Cloud Solution: Azure, O365, etc.
- Hybrid Solution.
